

# PondXpert Triple Action Evolve 4500

*How to set up your All In One*

## Step One

The unit is simplistic in design and easy to maintain.

The removable fountain attachment screws in to the main base as shown.

UVC viewing area.

# Fitments

Below are the remaining fitments for the Triple Action Evolve.

## Maintenance

The Triple Action Evolve is shown below with all attachments removed. The blue clips shown to the side allow the unit to be opened for maintenance.

The unit should be checked at least every 6 months, the bulb will need to be replaced and the filter sponge rinsed to ensure productivity.

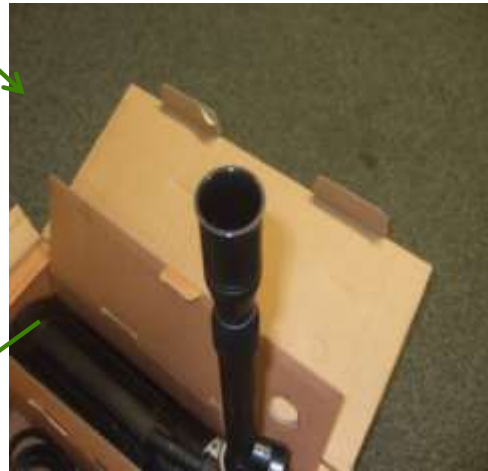

## Maintenance Continued...

The TripleAction Evolve is shown once the clips have been removed, this allows access to the interior of the unit.

# Fountain Heads

- The fountain heads are interchangeable to produce different water sprays.
- If you choose to change the original attachment you will firstly need to turn this fitment (1) anti-clockwise.
- The chosen fitment has a push and screw fitment as shown (2).
- Due to this being a new product the fitment may be stiff to begin with; do not worry this is normal.
