## Solids Handling Filter Pond Pump

Model	Power	Max Flow	Max.	Dimension	Outlet Size	Hosetail
	Rating		Head	LWH mm	mm	Supplied mm
PXFM03500	42w	3500 LPH	2.5m	267x223x132	25	20/25/32/40
PXFM04500	75w	4500 LPH	3.5m	267x223x132	25	20/25/32/40
PXFM05000	100w	5000 LPH	4.0m	267x223x132	25	20/25/32/40

All pumps can handle solids up to 5mm and come complete with 10m electrical cable. All pumps have a rated voltage of 220-240V, 50Hz

### Introduction

Congratulations on the purchase of your pondXpert pond pump. Used correctly your pond pump will provide years of reliable service. This pump is designed to run 24/7 pushing water through to a waterfall and/or filter system.

#### Your pump must always be immersed in fresh water before it is switched on.

#### **General safety Instructions**

Read and observe all of the instructions clearly before installing, connecting and operating the pump.

Make sure the pump is securely and correctly installed before switching on.

Always disconnect the pump when not in use and when carrying out maintenance.

Always disconnect all equipment in the pond before starting to handle, maintain, repair or install any pond equipment.

The appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

For safety reasons, servicing or repair of this item should only be carried out by pondXpert. Never hang or carry the pump by the power cord.

Do not operate the pump with a damaged cord or plug. The supply cord of the appliance cannot be replaced.

#### If the electrical cord is damaged the product should be scrapped.

#### Safety and Electrical Connections

This unit is designed for outdoor use only. It is waterproof and should be situated safely under the pond water. Ideally the pump should be situated at the bottom of the pond as this is where fish waste and debris collects. Take care to ensure that you can easily lift your pump out of the water for routine maintenance. If this is necessary do not pick your pump up by the electrical cable but by the main body/ cage of the pump.

Always disconnect all equipment in the pond before starting to handle, maintain, repair or install any pond equipment.

The pump is electrically operated so great care must be taken during installation and operation. The following electrical and safety guidelines must be carefully followed.

Each pump is supplied with a 10 metre length of 3 core electrical cable which is permanently connected to the pump.

The wires in the mains electrical lead are coloured in accordance with the following code:

BLUE – Neutral (marked with an "N" in most terminal connections) BROWN – LIVE (marked with an "L" in most terminal connections) GREEN/YELLOW – EARTH (marked "E" or in most terminal connections)

1<sup>st</sup> January 2005 revised Building Regulations for England and Wales Installing this product in the garden is classified as 'notifiable'. The Regulations now require you to tell your local authority building control department that you intend to install this product before installation. Your local authority will let you know how you can get your installation approved

The termination to the mains supply should be permanent, inside a dry weatherproof enclosure, through a double pole switched fused spur with a minimum contact gap of 3mm - (disconnected) to BS 3676 – and fitted with a 3 or 5 amp fuse.

Exposed cable runs should be sensibly positioned, and protected if necessary by armoured conduit.

A 10mA or 30mA Residual Current Circuit Breaker (RCD) MUST be fitted to the mains supply.

Permanent installations to the mains supply (hard wiring) must comply with the regulations of the local electricity authority which may stipulate the use of metal or plastic conduit to protect the cable.

If in any doubt about wiring to the mains supply contact a qualified electrician or your local electricity authority.

Protect from frost. In cold winter weather (when fish are inactive and algae growth ceases) the unit may be switched off. It should then be drained of water, removed (if possible) from its installation and stored in a dry, frost-protected area.

#### Directions for use

#### Remove fountain secondary strainer cage

Your pump comes with a revolutionary feature! It features twin strainer cages. This allows the filter pump to be used as a fountain pump (fountainhead set required – supplied with certain models). To run the pump as a filter pump the secondary fine strainer cage needs to be removed to allow solids to pass through to the impellor. If the secondary strainer is not removed then larger debris will not be transferred to the filter (if installed) and your pump will block with sludge more frequently. Here is a guide showing how to achieve this:

Fig 1 Accessing Pump

2, Twist off secondary strainer (keep safe)

First locate the outer strainer cage locking bolt at the bottom rear of the unit (see fig 1). Unscrew and keep safe then the four plastic locking clips can be released by carefully pressing down with a screwdriver (see fig 1). Once the pump itself can be accessed the secondary strainer can simply twisted off (and kept safe for future use). Then simply reassemble the pump following the steps above in reverse order.

#### Installation

Once installed the pond water will flow through the pump as the pump's impellor draws in water. It is always best to position your pump at the opposite end to where the water returns to the pond to provide maximum circulation.

Your pond is supplied with a hosetail. This should be screwed into the threaded pump inlet. Pond hose size 20-40 mm (3/4" to 11/2") can be attached to the inlet hosetail. Cut the inlet hose to the size appropriate to the size of hose you are using. Then connect the hose from your pump to your filter system or position it where you want the water to return. Ensure a watertight seal by the use of hoseclips.

#### Maintenance

Your pump performance will be reduced if the water intake is restricted in any way. Occasionally large solids may block the holes in the filter cage surrounding the pump – these should be carefully wiped away.

A clogged or dirty intake will put a strain on the motor and greatly reduce its performance. If the area where the pump is stood is very dirty, raising its position slightly will assist flow.

To clean the pump more thoroughly first disconnect the pump from the electricity supply and carefully remove the pump from the pond.

For quick cleaning your pump has a inlet at the front of the strainer cage through which a garden hose can be used to flush out any waste.

To clean the pump more thoroughly you will need to remove the impellor housing and impellor (to remove the external strainer cage see fig1). Locate and unscrew the impellor housing security screw as shown in fig 3, this plate can then be twisted off to reveal the impellor itself (fig 4). Remove any dirt/debris using clean water and a small brush and reassemble.

#### Limited Warranty

This product is guaranteed for a period of 12 months (excluding rotor/impellor assembly) from the date of purchase for material or manufacturing defects. The guarantee covers the substitution of defective parts. However, the guarantee is considered null and void in the case of improper use, improper handling or negligence on the part of the buyer. If your pondXpert pump fails please take it back to the retail outlet from where it was purchased. You will be required to take your receipt/proof of purchase with you. This does not affect your statutory rights.
